WT7204	1529	The weight variable WT7204 is the same as WT2004 for 2004. It takes into consideration the sub-sampling of initial non-respondents and the selection of one adult per household. See Appendix A for further discussion of WT2004. For years 1972-2002, WT7204 takes into consideration the selection of one adult per household by adjusting for the number of adult in the household. See general discussion of number of adult adjustment in Appendix A. When wanting to generalize to adults living in households and including more than just 2004, this weight should be utilized.
